

Case Study- **Business & Law, JOONDALUP**

Previous to the introduction of the Green Office Program, there were no formal environmental strategies being undertaken within the Faculty of Business and Law. This faculty now leads the way with 9 Reps participating in the program.

One of the strategies undertaken by second floor Reps Sherryn and Jenny was a collection of ceramic mugs to replace the need to use polystyrene cups in the staff room. They ran a successful competition amongst staff, offering thermal "Refill not Landfill" mugs as prizes and outfitted their kitchen with enough ceramics for all staff and visitors.

They have also recently introduced commingled recycling into their kitchen, with a view to potentially halve the waste being sent to landfill. All staff were emailed about the new recycling program, and posters have been displayed within the kitchenette.
