EJX 2023 Participants' Testimony

Jack Gibellini, Notre Dame University

It was good to be able to give outsider point of views about tourism as in that moment we were tourists. It is also great to hear what other places are doing to boost their tourism.

Anindya Hana Nararya, University of Airlangga

I can learn in more practical way about the complexity of how the government work in Surabaya, especially how they handle their tourism aspects. It gives me different and broad perspective on how tourism and city managerial is being handled in Surabaya because it is way different if you just see as a mere citizens. That program allows me as participant and a citizen itself to give the government some insight and little advice on how youth sees them and their works behind tourism.

Megan Reagon, Murdoch University

The best thing for me was being able to plant mangroves and to have a hands on experience being apart of conservation in a foreign country. It was a wonderful experience seeing the mangroves and contributing to the programs conservation and preservation.
